
PROJECT NAME:

University of Chichester - New Technology Building

CLIENT:

University of Chichester

LOCATION:

Bognor Campus

M&E ORDER VALUE:

£4m

CONTRACTOR:

Galliford Try

The new technical building for the University of Chichester houses the latest technology, encompassing automated and centrally controlled lighting and cooling systems.

The use of Chilled Beams has been adopted throughout, alongside an extensive surface mounted ducting system.

All MEP services within the building will be installed on the surface of the building structure and will showcase Dodd Group's expertise in this section across the services specified for the building.

With an extensive interactive trend BMS system including various outstations, the building thinks and reacts to the changing environment surrounding it.

Dodd Group has completed the MEP design for the building from Hoare Lea of Bournemouth. Working together on behalf of the end user, innovative systems and alternative equipment has been both specified and installed on site.
